

Human Body Puzzle

This file contains the images and instructions to make the human body jigsaw for the activity.

Each page will print onto 4 landscape A3 sheets of paper (or more A4).

You will also need:

- 5 large pieces of thick cardboard approximately 1m x 40cm (we used flattened cardboard boxes)
- Sellotape
- Glue (or spray adhesive may be easier)
- A craft knife or similar

Instructions

1. Print the images onto paper, then trim and sellotape them to make the full size body layers.
2. Stick each image onto a sheet of cardboard.
3. Leave the bottom layer (the skeleton) intact.
4. For each of the other layers, carefully cut around the outline of the puzzle pieces, leaving the excess cardboard intact. Each layer will have seven pieces.
5. Stick the outer pieces from each layer on top of the skeleton piece. This will give a stepped appearance.
6. Check that all the pieces slot back in. If necessary, make small adjustments to any areas that don't quite fit. Take care not to remove too much as that will let the pieces fall out too easily.
7. Finally, trim the excess to give a tidy end result.
